

Solution

Cost-effective repair solutions!

Abb. 1

The axle mounting bush for rear axle beams on the Renault Kangoo I with torsion bar suspension is not available individually from the manufacturer.

In the past, if the bearing failed, it always had to be replaced together with the complete rocker bar (Fig.1) because it could only be purchased as part of a repair kit.

SWAG has the solution for a timely and efficient repair:

The axle mounting bush is now available individually.

SWAG no. 60 92 3777
Repl. no. 77 00 301 255
Fits Renault Kangoo I

This saves your customer money, as it is cheaper to replace a single component than a complete unit.

Important!

The axle mounting bushes are also the focus of all major inspections (MOT). Since the vehicle in question is also designed for an increased weight, its bearings are subject to particularly high stress.
